

Priyal Shrivastava

User Researcher

[Work](#)[Play](#)[About](#)[Resume](#)

I'm an HCI researcher with 4+ years of experience working with people with low tech literacy

I am currently pursuing my **masters in Human Computer Interaction at Carnegie Mellon University**. I work with Professor Tom Costello on understanding **AI persuasion and belief systems**. My work sits at the intersection of human - AI communication, digital trust, and cross cultural research.

Before CMU, I spent over four years leading research projects at Razorpay, Microsoft, and Meesho - helping low tech literate and everyday users make sense of complex systems. At CMU, I'm extending this foundation through coursework in Augmenting Intelligence, Responsible AI, and Ethics & Policy in Computing, exploring how responsible design and research can guide the next generation of intelligent systems.

UXR in India - A historical perspective

I recently had the opportunity to collaborate on the book "*UXR in India - a historical perspective*" authored by Achyutha Sharma. This book provides a unique lens into the evolution of UXR practices, methodologies, and its impact in India.
